# Clear your browser history in Chrome

If Google Chrome is your browser of choice, this is the section for you. You can choose to sync your Chrome data, including your history as well as bookmarks and stored passwords, across your various devices. If you've done that, you only need to clear your history once, and you'll be all set. Otherwise, you'll need to perform this process on each device you use Chrome on.
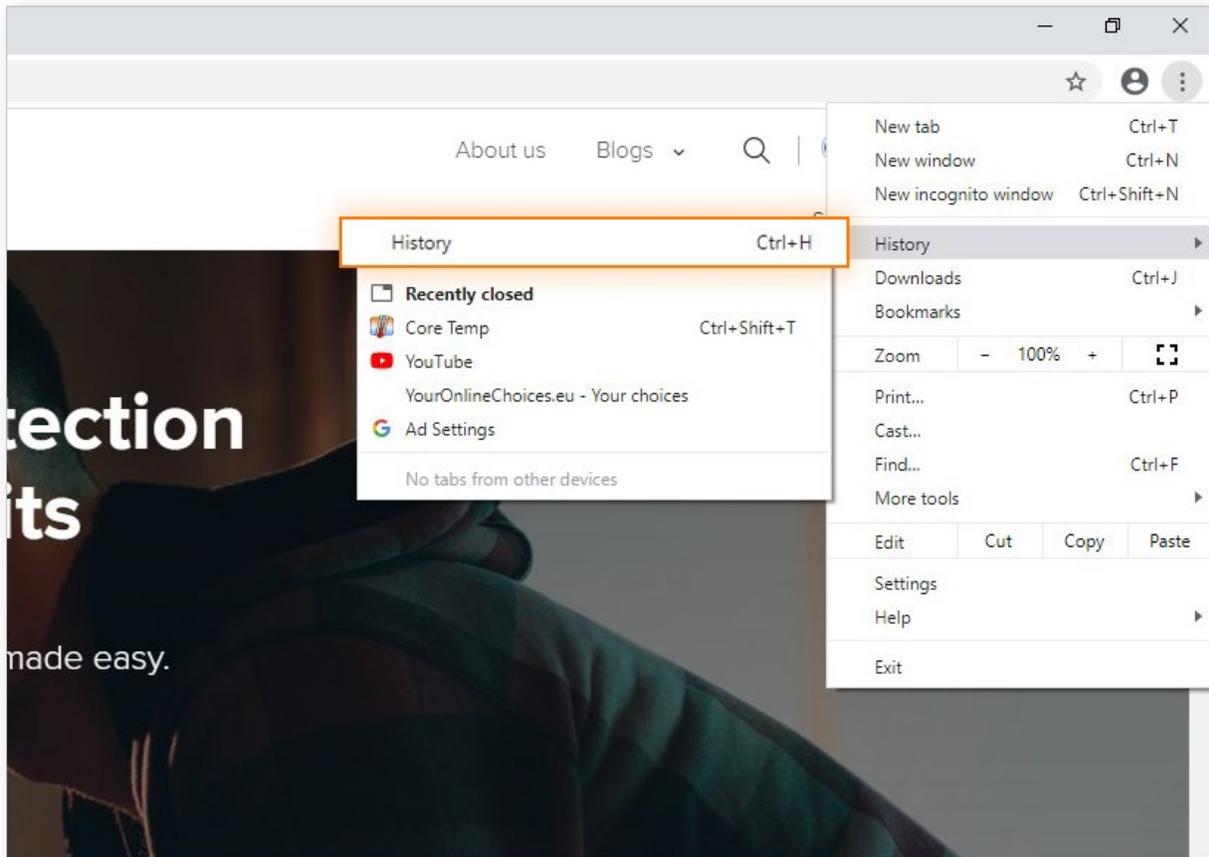

On desktop

It's a pretty straightforward process to clear Chrome's history on your desktop, and it's essentially the same for both Windows 10 and macOS. Let's get started.
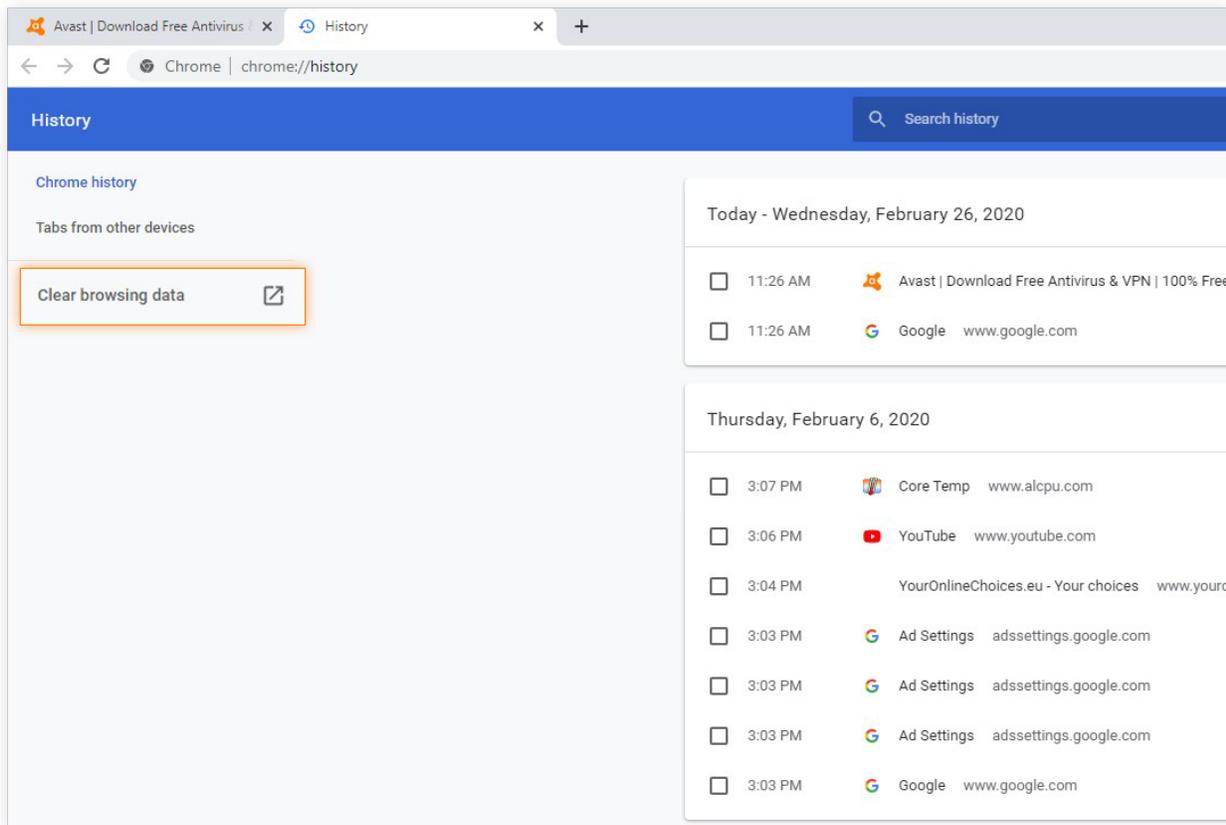

1. Open Chrome, then click the three dots in the upper-right corner.
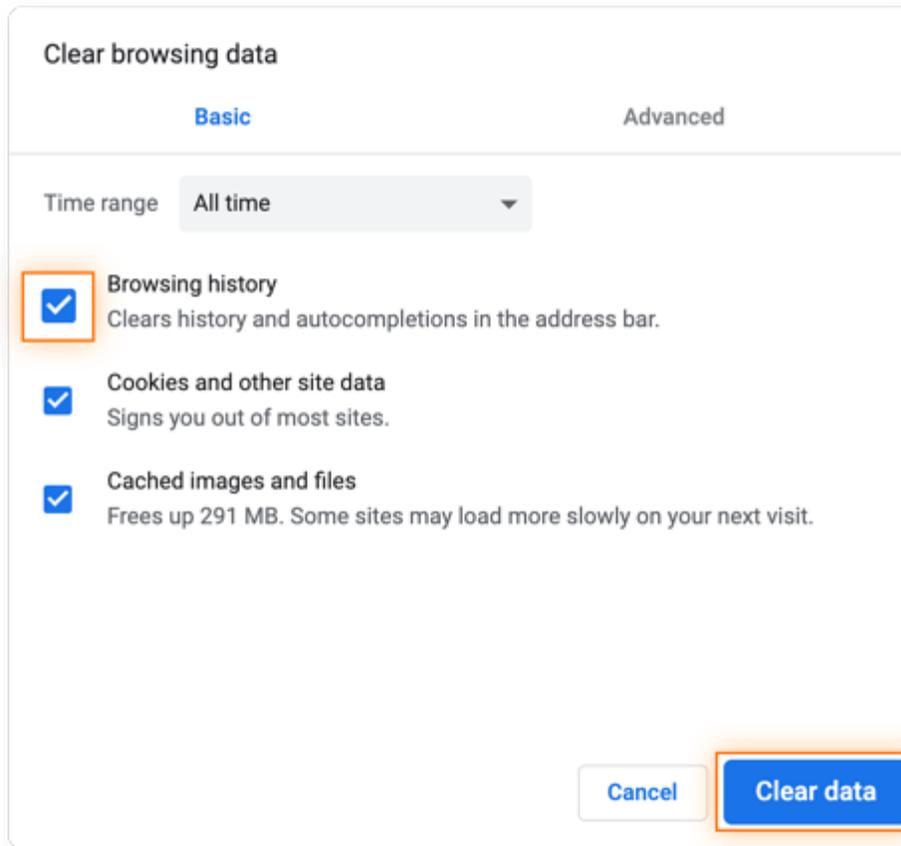

2. Mouse over **History**, then on the new menu that appears, select **History** again.

3. You'll see a new tab. Here, select **Clear browsing data** from the menu on the left.

4. Another tab will open with a pop-up box. This is where you'll actually see how to delete your history on Google Chrome. Ensure that the corresponding box for **Browsing history** is checked. You'll also need to select the time range from the drop-down menu. To delete your entire Chrome history, choose **All time**.

5. Click **Clear data** to delete your Chrome history for the time period you selected. And you're done!
